

MOLE SCRAM PROFESSIONAL

PROFESSIONAL APPLICATION INSTRUCTIONS

Product exempt from EPA registration under Section 25 (b) of FIFRA

Mole Scram™ Professional is an organic, granular repellent used to **REDUCE AND ELIMINATE** moles from your lawn. It is also an excellent **PREVENTATIVE MEASURE** when used in the spring and fall. Mole Scram Professional will safely and naturally stop mole infestation if used as directed.

APPLICATION INSTRUCTIONS: Using a rotary spreader, cover the entire areas where moles are present with a two phase application over a two week period. The initial application will drive moles out of affected areas and the second application will ensure they do not return for up to 45 days.

DAY 1: Apply Mole Scram Professional to the entire affected area of lawn starting at the area furthest from where you want the moles to exit, then water for approximately 20 minutes. Make sure the Mole Scram Professional is applied in a band at least 30 feet beyond and around the infested area where tunnels and holes are visible.

DAY 14: Apply Mole Scram Professional over the entire affected lawn, watering in the same way.

WHAT YOU SHOULD KNOW ABOUT THE

MOLE: The mole lives primarily underground. One mole may damage an entire lawn up to one acre in size. The mole's main food is the earthworm which is 80% to 90% of their diet, followed by insects and grubs. Mole Scram Pro's triple action formula coats earthworms and other insect food with a digestive system irritant, and also makes their environment smell disagreeable. Lastly, Mole Scram Professional reduces the activity and presence of insects (another part of mole's diets) within treated areas.

FREQUENCY OF USE: Mole Scram Professional should be applied at the beginning of Spring and then Fall, the two highest mole activity seasons. Moles may not exit your property when repelling them, regardless of the repellent used. They may burrow underground up to 5 feet to during drier periods when earthworm activity is deeper in the soil. As a result, you may have to reapply in the summer if heavy rainfalls occur and bring earthworms to the surface. Earthworm surface activity may attract moles as the worms are so important a part of the moles diet. However, mole damage will be greatly reduced through the use of Mole Scram Professional which causes them to migrate to a more attractive and untreated environment elsewhere.

GENERAL INFORMATION: Mole Scram Professional is a propriety blend of natural and organic, biodegradable ingredients specifically designed to reduce and eliminate mole activity. Our all-natural granular repellents contains more active ingredients that make it more effective than other repellents. **While Mole Scram Professional is fast acting, it may take a few days for moles to associate their discomfort with the treated areas.** Mole Scram Professional is both organic and biodegradable and will naturally break down over time.

COVERAGE: 22 LB CONTAINER will provide protection approximately 16,500 square feet.

Where possible, locate mole runways, then punch 1" holes every 10 feet and drop granules into the holes and cover with soil. Also apply to the end of each runway.
