

SENSCI VOLCANO® – BED BUG MONITOR

WHAT IS THE SENSCI VOLCANO BED BUG MONITOR?

- The SenSci Volcano is a free-standing interception device that can be placed next to the legs of beds and furniture as well as along walls and baseboards.
- When Volcano is paired with the SenSci Activ® Bed Bug Lure, the lure can attract up to twice as many bed bugs to the monitor.

WHAT DOES THE SENSCI VOLCANO DO?

- The SenSci Volcano can help detect bed bugs in a given environment as well as reduce the number of bites a person may be experiencing by capturing bed bugs in the monitor.

HOW DOES THE SENSCI VOLCANO WORK?

- SenSci Volcanos are pitfall-styled interception devices, which means bed bugs will crawl up the monitor's sides and fall into the "pitfall" of the trap where they cannot escape.
- SenSci Volcanos can detect the presence of bed bugs over the course of 4 weeks.
- If using the SenSci Activ lure with the Volcano, the non-toxic lure has a radius of 2-3 feet and can last up to 90 days.

CAN I MOVE THE SENSCI VOLCANO?

- NO! Please DO NOT MOVE THE MONITORS as they are placed in a strategic location for optimal effectiveness. If moved, they will reduce the effectiveness of detecting bed bugs in the environment. Unless specifically instructed by a pest control professional, DO NOT MOVE THE SENSCI MONITORS from their given location.

WHERE CAN I FIND OUT MORE INFORMATION ON THE SENSCI PRODUCTS?
