

SENSCI BLACKOUT® - BED BUG DETECTOR

WHAT IS THE SENSCI BLACKOUT BED BUG DETECTOR?

- SenSci BlackOut is an under-the-leg interception device that is placed under the legs of furniture to capture bed bugs.
- When BlackOut is paired with the SenSci Activ® Bed Bug Lure, the lure can attract up to twice as many bed bugs to the monitor.

WHAT DOES THE SENSCI BLACKOUT DO?

- SenSci BlackOut can help detect bed bugs in a given environment as well as reduce the number of bites a person may be experiencing by capturing the bugs in the monitor.
- SenSci Blackout works best in areas that are kept free of dust and dirt

HOW DOES THE SENSCI BLACKOUT WORK?

- SenSci BlackOuts are pitfall-styled interception devices, which means bed bugs will crawl up the monitor's sides and fall into the inner "well" of the trap where they cannot escape.
- SenSci BlackOuts can detect bed bugs in a setting as little as 2 weeks.
- If using the SenSci Activ lure with the BlackOut, the non-toxic lure has a radius of 2-3 feet and can last up to 90 days.

CAN I MOVE THE SENSCI BLACKOUT?

- NO! Please DO NOT MOVE THE MONITORS as they are placed in a strategic location for optimal effectiveness. If moved, they will reduce the effectiveness of detecting bed bugs in the environment. Unless specifically instructed by a pest control professional, DO NOT MOVE THE SENSCI MONITORS from their given location.
